EARTH or GROUND - GREEN/YELLOW

NEUTRAL - BLUE

LIVE - BROWN

After unpacking your amplifier check that it is factory fitted with a three pin 'grounded' (or earthed) plug. Before plugging into the power supply ensure you are connecting to a grounded earth outlet. If you should wish to change the factory fitted plug yourself, ensure that the wiring convention applicable to the country where the amplifier is to be used is strictly conformed to. As an example in the United Kingdom the cable colour code for connections are shown opposite.

GENERAL INSTRUCTIONS

In order to take full advantage of your new product and enjoy long and trouble-free performance, please read this owner's manual carefully, and keep it in a safe place for future reference.

1) Unpacking: On unpacking your product please check carefully for any signs of damage that may have occurred whilst in transit from the HH factory to your dealer. In the unlikely event that there has been damage, please re-pack your unit in its original carton and consult your dealer. We strongly advise you to keep your original transit carton, since in the unlikely event that your unit should develop a fault, you will be able to return it to your dealer for rectification securely packed.

2) Amplifier Connection: In order to avoid damage, it is advisable to establish and follow a pattern for turning on and off your system. With all system parts connected, turn on source equipment, tape decks, cd players, mixers, effects processors etc, BEFORE turning on your amplifier. Many products have large transient surges at turn on and off which can cause damage to your speakers.

By turning on your bass amplifier LAST and making sure its level control is set to a minimum, any transients from other equipment should not reach your loud speakers. Wait till all system parts have stabilised, usually a couple of seconds. Similarly when turning off your system always turn down the level controls on your bass amplifier and then turn off its power before turning off other equipment

3) Cables: Never use shielded or microphone cable for any speaker connections as this will not be substantial enough to handle the amplifier load and could cause damage to your complete system.

4) Servicing: The user should not attempt to service these products. Refer all servicing to qualified service personnel.

5. Do not use this apparatus near water.
6. Clean only with a dry cloth.
7. Do not block any of the ventilation openings. Install in accordance with manufacturer's instructions.
8. Do not install near any heat sources such as radiators, heat registers, stoves or other apparatus (including amplifiers) that produce heat.
9. An apparatus with Class I construction shall be connected to a mains socket outlet with a protective connection. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or third prong is provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10. Protect the power cord from being walked on or pinched, particularly at plugs, convenience receptacles, and the point they exit from the apparatus.
11. Only use attachments/accessories provided by the manufacturer.
12. Use only with a cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
13. The mains plug or appliance coupler is used as the disconnect device and shall remain readily operable. The user should allow easy access to any mains plug, mains coupler and mains switch used in conjunction with this unit thus making it readily operable. Unplug this apparatus during lightning storms or when unused for long periods of time.
14. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as when power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
15. Never break off the ground pin. Connect only to a power supply of the type marked on the unit adjacent to the power supply cord.
16. If this product is to be mounted in an equipment rack, rear support should be provided.
17. Note for UK only: If the colours of the wires in the mains lead of this unit do not correspond with the terminals in your plug, proceed as follows:
 - a) The wire that is coloured green and yellow must be connected to the terminal that is marked by the letter E, the earth symbol, coloured green or coloured green and yellow.
 - b) The wire that is coloured blue must be connected to the terminal that is marked with the letter N or the colour black.
 - c) The wire that is coloured brown must be connected to the terminal that is marked with the letter L or the colour red.
18. This electrical apparatus should not be exposed to dripping or splashing and care should be taken not to place objects containing liquids, such as vases, upon the apparatus.
19. Exposure to extremely high noise levels may cause a permanent hearing loss. Individuals vary considerably in susceptibility to noise-induced hearing loss, but nearly everyone will lose some hearing if exposed to sufficiently intense noise for a sufficient time.
The U.S. Government's Occupational Safety and Health Administration (OSHA) has specified the following permissible noise level exposures: According to OSHA, any exposure in excess of the above permissible limits could result in some hearing loss. Earplugs or protectors to the ear canals or over the ears must be worn when operating this amplification system in order to prevent a permanent hearing loss, if exposure is in excess of the limits as set forth above. To ensure against potentially dangerous exposure to high sound pressure levels, it is recommended that all persons exposed to equipment capable of producing high sound pressure levels such as this amplification system be protected by hearing protectors while this unit is in operation.
20. Symbols & nomenclature used on the product and in the product manuals, intended to alert the operator to areas where extra caution may be necessary, are as follows:
Intended to alert the user to the presence of high 'Dangerous Voltage' within the products enclosure that may be sufficient to constitute a risk of electrical shock to persons.
Intended to alert the user of the presence of important operating and maintenance (Servicing) instructions in the literature accompanying the product.

Die Anfälligkeit für durch Lärm bedingten Hörverlust ist von Mensch zu Mensch verschieden, das Gehör wird jedoch bei jedem in gewissem Maße geschädigt, der über einen bestimmten Zeitraum ausreichend starkem Lärm ausgesetzt ist. Die US-Arbeitschutzbehörde (Occupational and Health Administration, OSHA) hat die folgenden zulässigen Pegel für Lärmbelastung festgelegt: Laut OSHA kann jede Belastung über den obenstehenden zulässigen Grenzwerten zu einem gewissen Hörverlust führen. Sollte die Belastung die obenstehenden Grenzwerte übersteigen, müssen beim Betrieb dieses Verstärkungssystems Ohrstöpsel oder Schutzhörgeräte im Gehörgang oder über den Ohren getragen werden, um einen dauerhaften Hörverlust zu verhindern. Um sich vor einer möglicherweise gefährlichen Belastung durch hohe Schalldruckpegel zu schützen, wird allen Personen empfohlen, die mit Geräten arbeiten, die wie dieses Verstärkungssystem hohe Schalldruckpegel erzeugen können, beim Betrieb dieses Geräts einen Gehörschutz zu tragen.

20. Symbole und Nomenklatur, die auf dem Produkt und in den Handbüchern stehen, sollen den Bediener auf die Bereiche, in denen besondere Vorsicht notwendig sein kann, alarmieren und sind wie folgt:

- Sollen den Benutzer auf das Vorhandensein von "gefährlicher Hoch- Spannung" im Gerätegehäuse hinweisen, um die Gefahr eines elektrischen Schlages für Personen zu vermeiden..
- Sollen den Benutzer auf das Vorhandensein wichtiger Betriebs- und Wartungsanweisungen in der beigelegten Dokumentation aufmerksam machen.
- Gefahr eines elektrischen Schlags - NICHT ÖFFNEN. Um die Gefahr eines elektrischen Schlags zu reduzieren, darf die Abdeckung entfernen. Keine zu wartenden Teile im Inneren. Überlassen Sie die Wartung qualifiziertem Fachpersonal.

Os indivíduos variam consideravelmente a susceptibilidade ao ruído induzido perda de audição, mas quase todo mundo vai perder alguma audição se expostos a ruído suficientemente intensa durante um tempo suficiente.

Segurança do Trabalho do governo dos EUA e Administração de Saúde (OSHA) especificou os seguintes exposições de nível de ruído admissíveis: de acordo com OSHA, a exposição em excesso dos limites admissíveis acima poderia resultar em alguma perda de audição. Tampões ou protectores para o canal auditivo ou sobre as orelhas, deve ser usada quando se opera este sistema de amplificação de modo a evitar a perda permanente da audição, se a exposição for superior a dos limites tal como descrito acima. Para garantir contra a exposição potencialmente perigoso para elevados níveis de pressão de som, recomenda-se que todas as pessoas expostas a um equipamento capaz de produzir níveis elevados de pressão sonora, como este sistema de amplificação de ser protegidos por protetores auditivos enquanto esta unidade está em operação.
20. Símbolos e nomenclatura utilizados no produto e nos manuais de produtos, destinados para alertar o operador para as áreas onde o cuidado extra pode ser necessário, são os seguintes:

Com a intenção de alertar o utilizador para a presença de "tensão perigosa" alto dentro do recinto produtos que poderá ser suficiente para constituir um risco de choque elétrico para as pessoas.

Com a intenção de alertar o usuário da presença de importantes de operação e manutenção (assistência) na literatura que acompanha o produto.

Risco de choque elétrico - NÃO ABRA. Para reduzir o risco de choque elétrico, não remover a tampa. Não existem peças no interior. Consulte um técnico qualificado.

Para evitar choque elétrico ou risco de incêndio, não exponha este aparelho à chuva ou umidade. Antes de utilizar este aparelho, leia atentamente as instruções de operação.

Se o seu aparelho possui um mecanismo de inclinação ou um armário estilo propina, por favor, use esse recurso de design com cautela. Devido à facilidade com que o amplificador pode ser movida entre as posições de costas rectas e inclinada, usar apenas o amplificador numa superfície plana e estável. NÃO operar o amplificador em uma escrivaninha, mesa, prateleira ou de alguma forma inadequada plataforma nonstable.

8. Non installare vicino a fonti di calore come radiatori, regolatori di calore, stufe o altri apparecchi (inclusi gli amplificatori) che producono calore.
9. Un apparecchio in Classe I deve essere collegato a una presa di corrente di rete con connessione di protezione. Non annullare l'obiettivo di sicurezza della spina polarizzata o con messa a terra. Una spina polarizzata ha due lame, una più larga dell'altra. Una spina con messa a terra ha due lame e un terzo polo di terra. La lama più larga o il terzo polo servono per la sicurezza. Se la spina fornita non è adatta alla propria presa, consultare un elettricista per la sostituzione della presa obsoleta.
10. Proteggere il cavo di alimentazione venga calpestato o schiacciato, soprattutto in corrispondenza delle spine, delle prese e al punto in cui esce dall'apparecchio.
11. Usare solo dispositivi opzionali / accessori forniti dal produttore.
12. Usare solo con un carrello, supporto, cavalletto, sostegno o tavola specificate dal produttore o venduti con l'apparecchio. Quando si usa un carrello, prestare attenzione, muovendo il carrello / la combinazione di apparecchi, a non ferirsi-over.
13. La spina dell'alimentazione o apparecchio viene utilizzato come dispositivo di scollegamento e deve restare sempre operativo. L'utente deve consentire un facile accesso a qualsiasi presa di rete, accoppiatore di rete e interruttore di rete utilizzato in combinazione con l'unità rendendo così facilmente accessibile. Scollegare l'apparecchio durante i temporali o se non viene utilizzato per lunghi periodi di tempo.

INTRODUCTION

The HH HPT range of active cabinets, engineered in the UK to deliver power, performance and reliability.

There are three modes available, all featuring the same control surface and output stage, having differences with the cabinets size, speakers and resulting SPL.

All models feature dual 1/4" & XLR Mic/line input channels with individual gain controls, on-board DSP with 4 audio modes, Master Volume Control, Mix Output, Ground Switch and Illuminating Logo.

The HPT full range enclosures provide flexibility during use, either as a stand-alone unit or part of a larger system.

Multiple options are available to the user. These include a 35mm pole mount for use with a HPS active sub cabinet, four M8 integrated fly points for vertical or horizontal suspension, freestanding and kick back 35 degree monitor tilt. All models are easily transportable, with their elegant design and integrated carry handles.

GETTING STARTED

This manual contains important information regarding correct and safe operation of the HPT system. Please read it thoroughly in order to get the best performance and reliability from your HH product.

VOLTAGE SELECT SWITCH

Although every effort has been made to select the correct voltage for the region of use, please check before powering up for the first time. **Damage could occur if the voltage is incorrectly set.** If necessary, use a suitable tool to slide the Voltage Selector Switch to the required setting.

POWER CYCLE

Many products have large transient surges at turn on and off which can cause damage to your speakers. Following the sequence below for power-up and the reverse for power down will prevent this from occurring.

REAR PANEL CONTROL PANEL - THIS IS THE SAME FOR ALL MODELS.

1 & 2. INPUTS: A Combi Input allows for the use of both XLR and 1/4" Jacks and accepts balanced and unbalanced signals.

Note: a stereo signal on a TRS lead cannot be connected directly, and must be split to two mono connectors.

GAIN: Use to set the channel level.

Note: Set the Gain control to minimum before connecting an audio signal.

Once the system is powered up, we recommend that the Gain set to midway is a good starting point.

3. MASTER VOLUME: Controls the overall level of your HPT system.

Note: Set this control to minimum when switching the unit ON or Off.

LIMIT: The HPT cabinets are equipped with an onboard limiter to prevent overload to the power amplifiers and loudspeakers. The Limit led will illuminate when the Limiter is active. Occasional blinking of the Limit led is ok, but continuous illumination could result in damage to the system and Main Volume should be reduced.

4. MIX OUT: A signal feed which can be used to connect a second HPT cabinet (daisy chained - see page 12), active monitor, house PA or recording console for example. The Mix Out signal level is not affected by the Volume Control.

5. EQUALISATION: Four presets are included to optimise the response of the cabinet to suit your needs. Cycle through them using the Mode button.

MUSIC: A bass lift with a flat mid to high response.

LIVE: Similar to the 'MUSIC' response with the LF lift frequency shifted.

MONITOR: A LF and HF roll-off with a slight mid band cut for clarity.

VOCAL: A bass roll-off with flat mid and upper frequencies.

The EQ setting is stored and recalled following a power cycle. Please note the unit is shipped with the EQ mode set to Music.

6. OPTION: A Ground lift has been provided to reduce the potential problem of earth loops when connecting to other equipment. This control is to be used in conjunction with the MIX OUT.

The Cabinets front logo illumination can be turned ON/Off with the Logo control.

REAR PANEL CONTINUED

7. MAINS INLET SOCKET AND FUSE: IEC input for connection of an appropriate mains lead. Only replace the fuse with the type indicated on the rear panel.

8. MAINS SWITCH: Turns the system on and off. Ensure the Volume controls is set to minimum when switching on and off.

9. VOLTAGE SELECT SWITCH: As previously mentioned, please ensure the setting is correct before powering up to prevent damage to the amplifier.

10. INFORMATION: Area relating to the amplifier: Serial Number, operational information, power rating, etc.

11. AIR VENTS: These are critical for the longevity and reliability of the amplifier - **DO NOT BLOCK**. The same applies to the vents at the top of the control panel.

FUSE REPLACEMENT

SWITCH OFF AND DISCONNECT THE POWER CORD BEFORE PROCEEDING!

FUSE REPLACEMENT

1. Slide out the fuse holder tray.
2. Only replace fuse with the same type and power rating as specified on the rear panel.

EXAMPLE 1 - Daisy chained

If additional cabinets are required in the signal chain, simply connect the Mix Out of the primary cabinet to the Input of the Secondary cabinet.

EXAMPLE 5 - Full stereo setup

CONFIGURATIONS

The intuitive design of the HPT cabinets provide user flexibility and a product that will serve in many situations:

- A: Tripod/pole mounting - via the 35mm pole socket.
- B: Pole on sub.
- C: Flown vertically.
- D: Flown horizontally.
- E: Freestanding - on the ground.
- F: Monitor mode - the cabinets shape allows for horizontal/angled position on stage.

IMPORTANT

POLE MOUNT: Don't over-extend poles/tripods; ensure at least 4 x the pole diameter is still inside the outer pole. Make sure the legs have a good splay on tripods, but do not obstruct doorways or other access-ways. Make sure that the thumb screw on the cabinet is tight.

SUSPENDED

WARNING: The suspension or 'flying' of cabinets should be performed only by properly qualified persons, in compliance with all local laws.

The position of installation is also bound by laws and regulations so must be taken into account in the initial planning stages.

Hardware used must be fully approved for its intended use and be rated to support weights greater than that of the cabinet.

All installation equipment used is subject to regular safety checks which must be strictly adhered to.

If any of the hardware shows any signs of wear or damage, it should be replaced immediately.

Failure to do so could result in serious injury or death!

FITTING EYE BOLTS

A: To fit the eye bolts, first locate and remove the four rubber protection caps (positions shown below).

B: Replace with a suitable eye bolt. Ensure thread is fully engaged into the insert.

Note that eye bolts for flying systems must be cast, shouldered fittings rated for the purpose.

Forged steel eye bolts of the type typically available from DIY suppliers are NOT suitable and should not be used under any circumstances.

QUICK TIPS

- Use electronic safety devices such as circuit breakers.
- Master volume should be at zero for switch on and off.
- Use input gain to set maximum signal level without distortion.
- Set up microphone levels first, and adjust other equipment to match.
- Avoid very high onstage levels from back-line amps.
- Avoid damp environments and extremes of temperature for storage and use of all audio equipment.
- Look after your cables. Do not stand equipment on, or run cases over them, do not tie knots in them and always use them for the correct application (a signal lead is NOT a speaker lead). Coil and secure with cable ties before storing.
- Ensure your equipment is properly loaded and cannot move around during transit.
- Keep lights away from speakers; heat can cause fires/speaker damage.
- Don't run cables across access-ways; if you have to, run them above doors or use approved cable covers.
- Be aware of total power usage. Overloading a mains socket is potentially dangerous, and likely to cause a power out during use.
- Keep power and signal cables apart.
